Global Education Checklist

for Teachers, Schools, School Systems and State Education Agencies

By FRED CZARRA

Occasional Papers from the American Forum for Global Education

THE AMERICAN FORUM FOR GLOBAL EDUCATION

A private, not-for-profit organization founded in 1970. Our mission is to educate United States citizens for responsible participation in our communities, our nation and our interdependent world. We offer consultation to global education programs and to those schools planning to “internationalize” or “globalize” their curriculum. We provide global and international education materials for classroom use and professional development programs for teachers and administrators. We are a forum for the exchange of ideas and practices on content and directions of global education.

National and state educational standards contain some global and international studies components. However, many important issues related to global and international studies are missing or dealt with inadequately. Gaps in the standards lead many educators to wonder what US students should know and understand about the world. What skills and attitudes will they need to confront future global problems?

In 1998, to help elementary and secondary school educators, three prominent global education scholars, H. Thomas Collins, Frederick R. Czarra, and Andrew F. Smith published a set of guidelines or intellectual filters that could be used to validate state standards and local curriculum decisions and to assure that the international dimension receives attention.¹

With that document as its foundation, this checklist is a practical tool that teachers, curriculum developers, school administrators, and state education agency staff can use to gauge their work within the realm of global/international education.

The premise here is that the study of the world can be divided into three main themes: global issues, global culture, and global connections. These three themes cross all academic disciplines—geography, history, world languages, health, the sciences and the arts and identify essential ideas that should be pursued through questions that relate to the daily life of students. Among the skills that students can develop are issue analysis, problem solving, interpretation, reasoned persuasion, and research/investigation. Students should be encouraged to be actively involved at the local, state, and national levels practicing their civic duty through relationships with our economic, social and political systems.

Consider this checklist a self-assessment tool. Use the scale here to measure the degree of success in the different areas in question. Create a self-assessment report that includes qualitative and quantitative evidence to support responses to the various questions. Once this needs assessment is completed, develop action plans for the development of specific goals, defining resources, time and participation required. The action plan should be continuously updated with progress being noted.

1. GLOBAL ISSUES—KNOWLEDGE

What do your students know about global issues, and how well do they know it?

- a. Are students aware that global issues exist and affect their lives?
- b. Are students studying a global issue in depth over a long period of time?
- c. Are students aware that global issues are interrelated, complex and challenging, and ever changing?
- d. Are students aware that their information and knowledge on most global issues can be expanded, or could be deeper, and that they need to continue seeking information about how global issues are formed and influenced?

2. GLOBAL ISSUES—SKILLS

How are your students going to learn about issues?

- a. Do students know how to study about global issues? Do they have the skills needed to investigate and research a topic or issue, solve problems, analyze issues, interpret information, make a case for a point of view through reasoned persuasion?
- b. Do students know how to look for information about an issue? Do students know how to develop criteria for discriminating, evaluating, selecting and responding to useful and relevant data? Do they know how to process the information that they have found? Do they know how to present their information to others?
- c. Do students have the ability to suspend judgment when confronted with new information about an issue when that information is in conflict with their own understandings and values?

Add A Global Dimension

- Global terrorism has recently changed the world.**
- The global economy has been changing the world for some time.**
- Sustainability of the earth and its inhabitants requires acute attention to the global environment and the means to development.**

These three facts alone—and there are certainly more—are reason enough to ask:

- Are the American people prepared for this new world?
- Are we learning to think globally?

We *are* beginning to realize how much more we need to know and understand—about the effects of globalization on the economies of the world and the well being of the world's peoples; about the complexities and influences of cultures and religions, and the differing if not conflicting perspectives of our enemies and even our friends. But we have a way to go.

In the aftermath of the September 11, 2001 terrorist attacks, Secretary of State Colin Powell said that Americans must be engaged with the rest of the world more than ever before. Clearly our schools and institutions of higher education must play an important role.

4. STATE STANDARDS, CURRICULUM, AND ASSESSMENT

- a. Do your state standards contain global concepts, connections, ideas, and issues?
For example, in science: Are global issues in science and the historical contributions of people from all over the world to the advancement of scientific knowledge considered? In art and music, are the contributions of ethnic and racial groups in the United States included as well as a representation of music and art from around the world? Do your foreign language standards reflect the ethnic and racial diversity of your state? In reading and literature, are there works that reflect the diversity in the United States as well as literary perspectives from other cultures around the world? In geography and history, is a global perspective considered to give students an overview of the world as well an opportunity to study other nations and cultures indepth?
- b. Do you establish continuing communication with international assessment organizations such as the International Association for Evaluation (IEA) and the National Assessment of Educational Progress (NAEP), and international cross-cultural comparisons such as the TIMMS science and mathematics study?
- c. Do you attempt to find out about good teaching and learning practices in other nations?
- d. Do you join with federal or international agencies to establish cooperative assessment and evaluation programs of state and local global/international educational and second-language programs?
- e. Do you establish expectations and proficiency in second languages for students completing high school?
- f. Do you work with various levels of the educational system (elementary, secondary, community college, technical schools, colleges and universities) to integrate instruction so that global/international education and second-language study is well connected among levels so that each student's learning is continuous?
